                                                                                                                                                                                                                                                                                                                                                                                                                                                                              CC rapidly and transiently induced in waterlogged roots and in wounded CC leaves. In combination with LE-ACS2, the LE-ACS7 transcript forms a CC rhythmic pattern that slightly precedes the diurnal fluctuation of CC ethylene synthesis by leaves of the flooded plants. Thus, the invention CC prowides a new class of inducible promoters, especially the LE-ACS7 gene CC within minutes of stimulus. The promoters can be induced by environmental CC stress, such as flooding or wounding, without the application of CC chemicals. The LE-ACS7 promoter can be recombinantly fused to a CC chemicals. The LE-ACS7 promoter can be recombinant expression CC cassettes. Flooding can be used to induce expression of e.g. genes that CC control resistance to insect pests or pathogens, or which confer CC resistance to herbicides, cold, salinity, drought or wounding. Alternatively, the promoter may be used to transcribe an mENA that is not CC translated into a protein. e.g. antisense RNA or ribozymes. The LE-ACS7 promoter contains an region, designated LEACS75013, that shows homology CC terminal inverted repeats. It also contains 3 motifs that show homology to polygalacturonase promoter nuclear protein binding DNA sequences (see also ABN84857-59)
                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match

The present sequence, the promoter region of which is claimed, is the 1-CC aminocyclopropane-1-carboxyllc acid synthase (ACC synthase) LE-AC97 gene con tomato chromosome 2. The gene was isolated by a combination of PCR con tomato chromosome 2. The gene was isolated by a combination of PCR con tomato chromosome 2. The gene was isolated by a combination of PCR con tomato chromosome 2. The gene was isolated by a combination of PCR con to transiently induced in waterlogged roots and in wounded con the combination with LE-ACS7 transcript forms a combination with LE-ACS7 transcript forms a control pattern that slightly precedes the diurnal fluctuation of the provide and the provide transient expression of a desired protein or mRNA components, that provide transient expression of a desired protein or mRNA components, such as flooding or wounding, without the application of themicals. The LE-ACS7 promoter can be recombinantly fused to a chemicals. The LE-ACS7 promoter can be recombinantly fused to a desertes, such as flooding or wounding, without the application of the confermation of the promoter can be recombinantly fused to a cherologous nucleic acid to produce claimed recombinant expression control resistance to insect pests or pathogens, or which confermatively, the promoter may be used to transcribe an mRNA that is not translated into a protein. e.g. antisense RNA or ribozymes. The LE-ACS7 promoter contains an region, designated LEACS75013, that shows homology components contains an region, designated LEACS75013, that shows homology can be used to protein the promoter contains and region designated LEACS75013, that shows homology components can be contained the contained that shows homology can be used to transcribe and the shows homology can be used to transcribe and the shows homology can be used to transcribe and the shows homology can be used to transcribe and the shows homology can be used to transcribe and the shows homology can be used to transcribe and the shows homology can be used to transcribe and the

/note="Vector: pBlueScript SK(-); Site_1: EcoR1; Site_2:
Xho1; supplier: Giovannoni; Fruit were tagged at the
breaker stage (first sign of lycopene accumulation on the
blossom end of the fruit) and harvested 7 days
post-breaker (fully red-ripe), 10 days post breaker, and
20 days post-breaker (over-ripe). 20 day fruit which
showed external or internal signs of pathogenesis were
discarded. Fruit were cut in half and the seeds and
locules were discarded prior to freezing the pericarp."

/clone_lib="tomato fruit red ripe, TAMU"
/note="Vector: pBlueScript SK(-); Site_1: EcoR1; Site_2:
Xhol; supplier: Glovannoni; Fruit were tagged at the
breaker stage (first sign of lycopene accumulation on the
blossom end of the fruit) and harvested 7 days
post-breaker (fully red-ripe), 10 days post breaker, and
20 days post-breaker (over-ripe). 20 day fruit which
showed external or internal signs of pathogenesis were
discarded. Fruit were cut in half and the seeds and
locules were discarded prior to freezing the pericarp."

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               7025
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         1341
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 1281
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        1221
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  461;
                                                                                  The predicted N-terminal AA sequence of PG-2a occurs at AA72. Since the ATG at bp 51 codes for the only inframe methionine preceding the N-terminal sequence of PG-2a, it is probable that the mRNA is translated with a 71AA pre-sequence that is subsequently cleaved to give a 41,828D mature protein.

TITLE OF INVENTION: Transgenic Mutations in the Polygalacturonase Activity
TITLE OF INVENTION NUMBER: US/10/691,374
CURRENT APPLICATION NUMBER: US/10/691,374
CURRENT FILING DATE: 2003-10-22
NUMBER OF SEQ ID NOS: 50
SOFTWARE: Patentin version 3.1
SEQ ID NO 1
LENGTH: 7456
TYPE: DNA
TORNATUM: Transgenic Activity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   RESULT 8

APPLICANT: Epigenomics AG
ITITLE OF INVENTION: Methods and nucleic acids for the analys:
FILE REFERENCE:
CURRENT APPLICATION NUMBER: US/10/473,126
CURRENT APPLICATION NUMBER: US/20/473,126
CURRENT FILING ABTE: 2003-09-26
NUMBER OF SEQ ID NOS: 1258
SEQ ID NO 240
LENGTH: 8056
TYPE: DNA
ORGANISM: Artificial Sequence
FEATURE:
COTHER INFORMATION: chemically treated genomic DNA (Homo sap: US-10-473-126-240)
